

This series of videos requires a small setup i suggest you use a copy of my setup which is already predefined, it might take you a while to configure but every folder has the text file with instructions step by step on how to configure each app

Just use the links bellow each product to download them, since you are using them with my license which is a type of license allowed for unlimited amount of users it cannot be upgraded or updated because it renews the plan which this license is part of and downgrades you to the more recent version but in demo version for a trial period usually of 7 days, so just to remember never to upgrade it to hold the value of the license
